

A4F04 - NOTES AND COMPUTED VARIABLES
(Life Events Questionnaire)

Computed Variables

- A04COUNT - the number of events to which a participant responded positively (i.e., a response of 2). In the calculations, a response of zero was assumed to be a negative response as was 1; however, if a form contained all zeros, A04COUNT was set to missing.
- A04SCORE - a sum of the weights for all items to which a participant responded positively. There are only 50 items of 66 for which weights have been established, thus the sum is of the weights of a possible 50 responses. In the calculations, a response of zero was assumed to be a negative response and thus does not affect A04SCORE. If all responses were zeros, A04SCORE is set to missing.
