

C1F13 - NOTES AND COMPUTED VARIABLES

(Cook Medley)

Computed Variables

C13SCORE: the sum of the 'hostile' responses, derived from the MMPI; note that a 'true' response is the hostile response except for variables C13SYMPA, C13FRNDL and C13ANGER, for which a 'false' response is the hostile response. These three variables were reverse scored.

C13SCORE is missing when one or more of the variables used to compute it is missing.

Scores may range from 0 to 50, with higher scores indicative of greater levels of hostility.
