

BFLWUP1 - NOTES AND COMPUTED VARIABLES

(Follow-Up Data between Year 2 and Year 5 Exams)

This file contains the information for each of the basic follow-up contacts that were done at 6-month intervals between the Year 2 and Year 5 exams. For the basic follow-up contacts, there is not a study-wide form used; an example from one period in Minneapolis is provided with variable names.

All of the numeric data for the yearly detailed follow-up contacts (36 and 48 months) are also contained in this data set. The dates and details concerning injuries/illnesses, doctor visits, and hospitalizations are contained in a separate data set (BFLWUPT1).
