

MEDICAL HISTORY FOLLOW-UP FILES - NOTES AND COMPUTED VARIABLES

The Medical History Follow-Up data can be found in four files. Only women who completed these forms are included in the files. Those files and the data contained therein include:

D1F09PER	-	Menstrual Period
D1F9PRG1		
D1F9PRG2		Pregnancy (see following notes)
D1F9PRG3		

Special Notes Regarding Pregnancy Files

In order to ease handling and interpretation, the pregnancy follow-up variables have been split into three files. These files are named: D1F9PRG1.SSD, D1F9PRG2.SSD, and D1F9PRG3.SSD. See the PROC CONTENTS output for detailed lists of variables contained in these files.

D1F9PRG1.SSD contains one observation for each participant who completed a Pregnancy Follow-up form (whether or not they answered 'Yes' to Question 38 on Form 8) and the variables from **page 1** of the form; an observation in this file is uniquely identified by the 5-digit CARDIA ID (SAS variable SHORT_ID).

D1F9PRG2.SSD contains one observation for each pregnancy reported as occurring between Exam 3 and Exam 4, and the variables from **pages 2 and 4** of the form; an observation from this file is uniquely identified by the combination of SHORT_ID and the pregnancy number (SAS variable D09PRGNO). Note that pregnancies contemporaneous with the interview are identified as pregnancy "0" (zero); other pregnancies should be numbered, beginning with "1" (one) from earliest to latest.

D1F9PRG3.SSD contains one observation for each infant resulting from each pregnancy, and the variables from **page 3** of the

form; observations are uniquely identified by the combination of SHORT_ID, D09PRGNO, and the infant number (SAS variable D09WHICH).
